

BorneoIce - QuickStart

Development tool installation

Plugin installation/update (Eclipse already installed)

Download

Download the Borneo plugin:

Borneo plugin for Eclipse (for 32 or 64 bits JVM)

requirements: Eclipse and Java must be installed on your computer

installation : uncompress the archive in your eclipse **dropins** directory or **plugins** directory.

You will find download links on:

<http://www.borneoready.com/index.php/downloads>

Installation

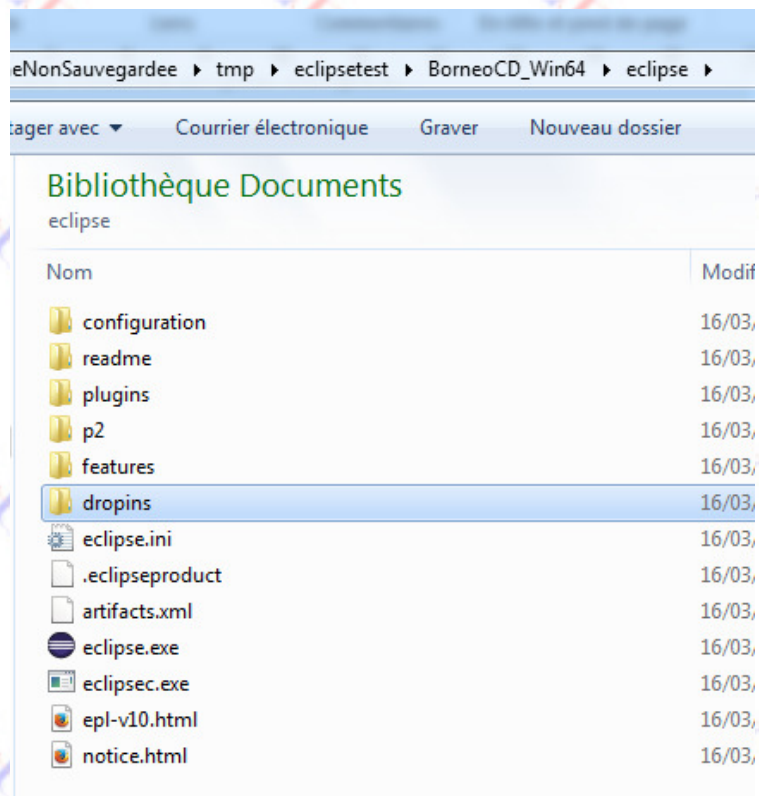

Close all Eclipse instances.

If you update the plugin, remove the old one from your disk.

To remove it, you have to delete the directory named “**borneo_1.6.0**”. You will find it in the “**eclipse→dropins**” directory or if you don’t have the “**dropins**” directory, in the “**eclipse→plugins**” directory.

Once the archive fully downloaded, unzip it in eclipse “**dropins**” directory. If you don’t have this directory, unzip the archive in the “**eclipse→plugins**” directory.

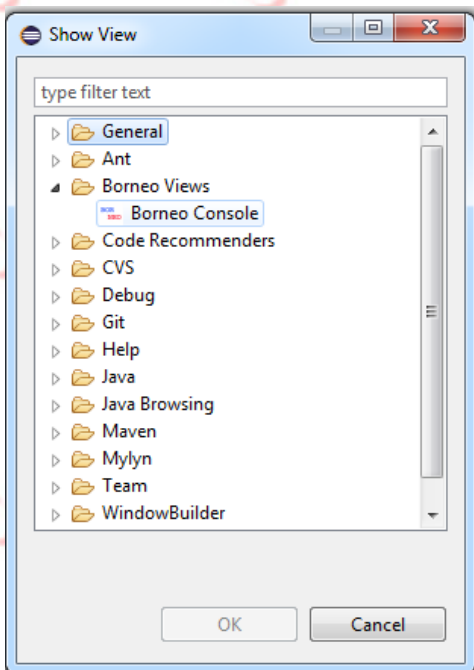

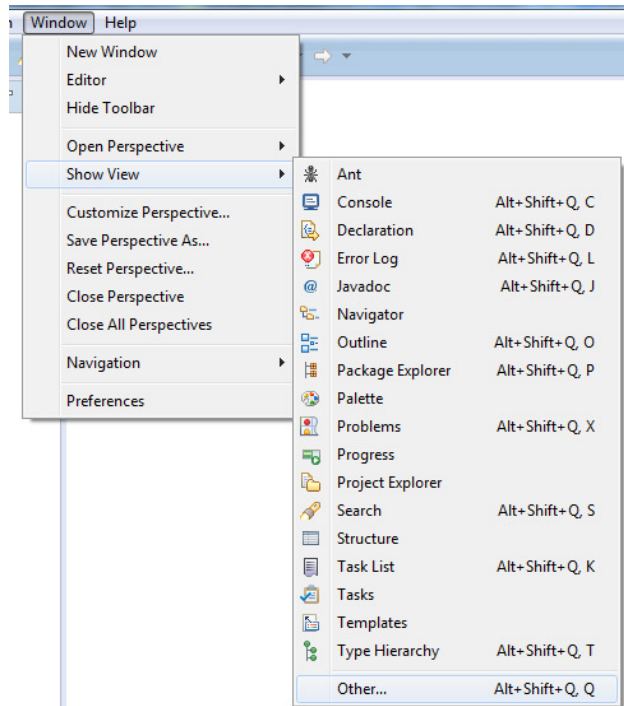

Last step : Check if Borneo plugin is correctly installed

If the plugin was already display in the last Eclipse session, you should see it without doing anything (configuration saved in the workspace). If not:

Click on :

Window→**Show View**→**Other**

Select :

Borneo Views→**Borneo Console**

And click “OK”

And you should see:

In this case you can go to the BorneoIce_Project
